## **DiSTI Joins Innovation Network for Warfighter Systems**

**Orlando, FL April 14, 2008** – The DiSTI Corporation announced today that it has joined the EDGE™ Innovation Network, a collaborative, open-environment initiative that enables industry, academia and government to work together to enhance the delivery cycle of technology and innovation to the warfighter. The EDGE provides facilities and laboratories for developing and testing technologies, products and systems to equip a new breed of warfighter who is mobile, connected and informed.

“DiSTI is proud to join the EDGE Innovation Network and further its endeavors in supporting the warfighter with next generation systems” said DiSTI President Joe Swinski. “The tools and technology DiSTI offers for rapid tactical display prototyping and development can help streamline the process for making sure warfighters receive the information they need to complete their mission.”

Since the EDGE Network’s inception, more than 20 projects have either been fielded or positioned as a technology insertion into a military program of record. Projects underway for 2008 include improved distribution of video and digital imagery sent between soldiers and their commanders; and improvements in power cells reducing weight and increasing battery life needed to power essential warrior communications and navigation systems.

Members recently joining the EDGE include: Cisco Systems, Inc., San Jose, Calif.; Hidalgo, Ltd, Cambridge, England; Intel Corporation, Chandler, Ariz.; Micro Power Electronics, Inc., Beaverton, Ore.; and Nacre AS, Trondheim, Norway. There are currently 58 EDGE Innovation Network members. More information can be on the Internet at [www.EDGE-innovation.com](http://www.EDGE-innovation.com).

The EDGE Innovation Network is sponsored by General Dynamics C4 Systems, a business unit of General Dynamics (NYSE: GD).

## **About DiSTI**

DiSTI is a global leader in the development of Human Machine Interface software for businesses, governments, and the military. The company's flagship product, GL Studio, enables programmers and developers to build high-fidelity graphics, 3D simulations, and fully interactive controls into their models, enhancing the level of realism and sophistication, while improving learning and retention.

More than 400 customers worldwide including the US military services and prime contractors such as BAE Systems, Boeing, FedEx, Lockheed Martin, Honeywell, Raytheon, and Thales use DiSTI solutions to build operator and maintenance training systems, create PC and Internet-based courseware, and develop components for safety-critical, embedded applications. As a full service provider, DiSTI offers a complement of custom programming and development services, and is a recognized leader in training solutions for the global simulation and training community.
